GIBB GROUP
MEDICAL & RESCUE

Service Description

External Quality Assurance (EQA) Consultancy

Gibb Medical & Rescue can offer an ongoing programme of External Quality Assurance (EQA) to its clients.

For example, we provided a full year of EQA for a County Fire and Rescue Service client. This included over 50 visits to local fire stations, to quality assure the service's clinical skills at both Watch and Station level in a simulated environment.

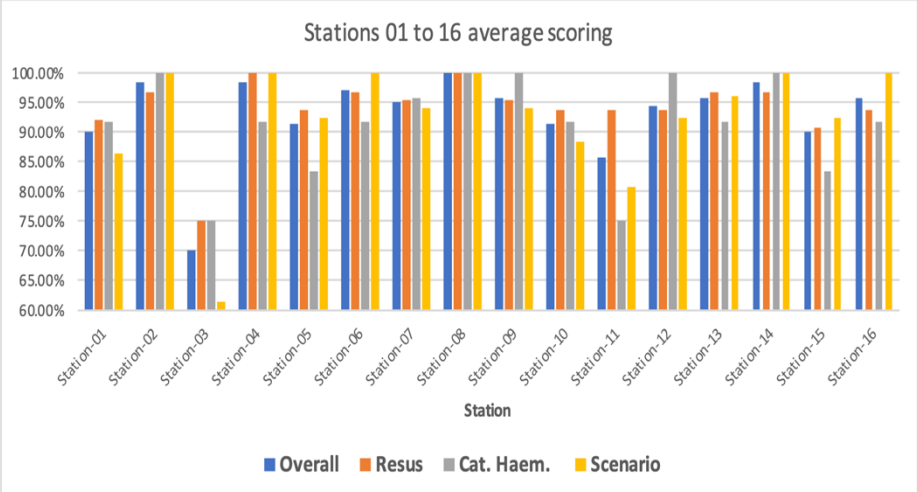
Robust service feedback on the standard of skills has been supplied, along with a professional evaluation of both strengths and areas for improvement.

A FOCUSED EQA PROGRAMME

The programme content is mutually agreed by the clinical governance faculties of both parties, enabling observation and assessment of simulated skills, as well as providing concise overviews of emerging industry developments that influence patient care.

A comprehensive and standardised data set is obtained through the EQA process, enabling objective evaluation of performance, categorised by station, watch, and practitioner qualifications.

Services adopting our focused EQA program will improve standards of clinical skills and assurance by empowering them to respond appropriately to emerging trends, acknowledge commendable practices, and identify training, development, and support requirements.



Service includes:

- Site visits
- Observation and assessment of clinical skills
- Robust service feedback
- Quality assurance reports
- Acknowledgement of commendable practices
- Objective evaluation of strengths and areas for improvement
- Identification of training, development and support requirements
