MEDICAL & RESCUE

Service Description

Hospital Placements

We are pleased to be able to offer these to delegates at a number of busy hospitals throughout the UK.

The 5-Day hospital placement is a fantastic opportunity for IEC Advanced, RAFA and FALP Module 5 Instructors to gain hands-on experience in managing patients' airways, ventilation techniques and working with experts in trauma & resuscitation.

VALUE OF THESE PLACEMENTS

Despite the high quality of simulation, training with manikins can differ from applying your knowledge and skills in the real world, particularly when critical situations arise.

Upon successful completion of the IEC, RAFA or FALP Module 5 Instructor course and subject to an approved enhanced DBS check, we can facilitate the opportunity to attend a five-day hospital placement where you will work with members of our team in a busy hospital. This placement will provide you with an enhanced learning experience and allow you to apply your training to real-world scenarios.

A hospital placement may also be appropriate as an integral component of your ongoing continuing professional development (CPD) portfolio.

Such a placement will not merely involve observing the role. It will be a practical placement that provides students with hands-on experience working with real-life patients. Students may be required to undertake various airway management procedures, including laryngeal mask insertions, and attend cardiac arrest events.

All students will be under direct supervision of critical care staff at all times, and under the overall supervision of a leading consultant.

Placement summary:

- Duration: 5 Days
- Course Prerequisites:

  IEC, RAFA or FALP Module 5 Instructor qualification
- Flexible Choice of Venues:

  Placements available at a number of hospitals across the UK

Placement includes:
